Decision Support Maintenance
Analytical Report
Description:
Tool to analyze BCM, Cannibalization and Failure cases from one screen. Search Criteria below allows multiple valuable reports. Example: A squadron can analyze data based on a deployment or training period. Comparative analyses can be made between "like" squadrons deployment statistics.
Search Criteria*:
Serial Number - cannot be queried by itself, wildcard (%) searches are not permitted
Part Number - can be queried by itself, wildcard (%) searches are not permitted
CAGE Code - can be queried by itself, wildcard (%) searches are not permitted
Start Date - cannot be queried by itself, must be queried with End Date, must be no more than 180 days before End Date, format must be MM/DD/YYYY
Done

This result set can be further manipulated and analyzed utilizing the grouping function located on the left, and the add to criteria link located on the result set.
By grouping on one or more of the optional fields in the pull-down box, the result set is broken down or "grouped" by the selection made.
For each grouping selection, a representative column is automatically added to the result set (which can been seen on the next slide).
CLICK THE LEFT MOUSE BUTTON TO FOLLOW THE STEPS.
2 – Click Group here or at arrow
Done
Internet

1. For this example, select CAGE Code under "Grouping."

2. Select "Group"
